

# Determining the angular position of a moving object

Smirnov B.M.

Mendeleev All-Russia Research Institute of Metrology, Russian Federation

**Abstract:** The angular position of a moving object may be determined from the measured vector for the acceleration due to gravity, the external magnetic field induction, and the magnetic induction from a source of alternating magnetic field. © Springer Science+Business Media, Inc. 2006.

**Author Keywords:** Acceleration due to gravity; Geomagnetic field; Induction; Object; Sensor; Sources
